

Stored Cross-Site Scripting (XSS) vulnerability was found in the /lms/admin/school\_year.php page of the KASHIPARA E-learning Management System project v1.0. This vulnerability allows remote attackers to execute arbitrary scripts via the school\_year parameter in a POST HTTP request.

➤ **Official Website URL**

<https://www.kashipara.com/project/php/13138/e-learning-management-system-php-project-source-code>

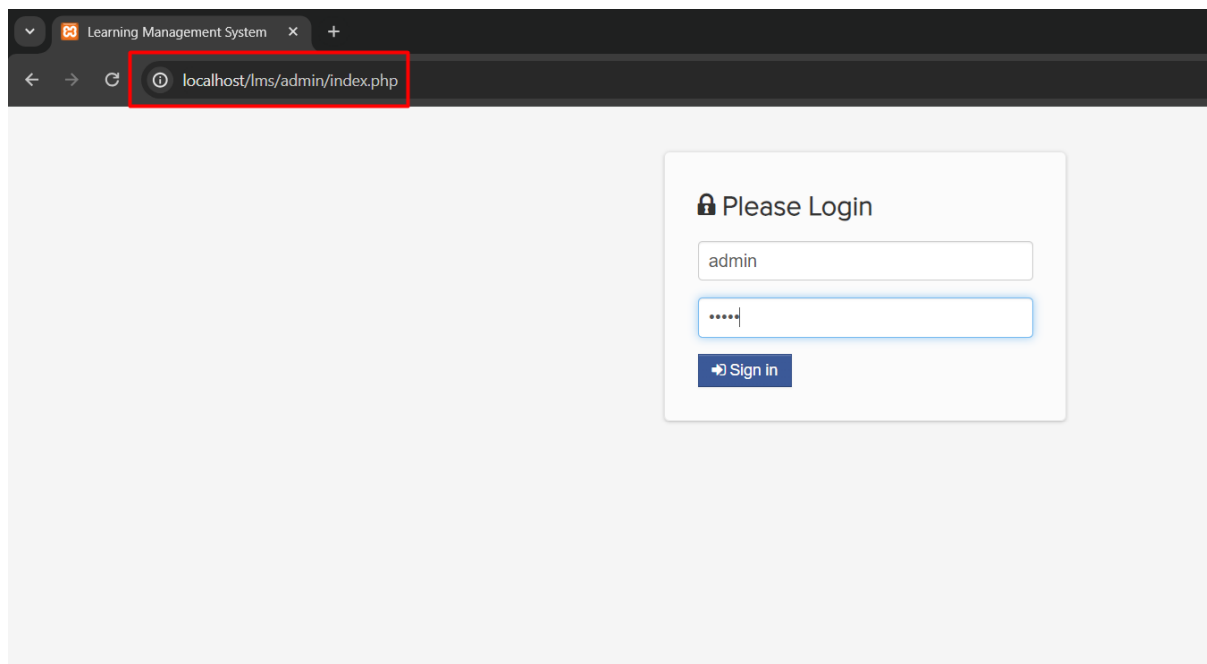

➤ **Affected Product Name**

E-learning Management System project in PHP with source code and document

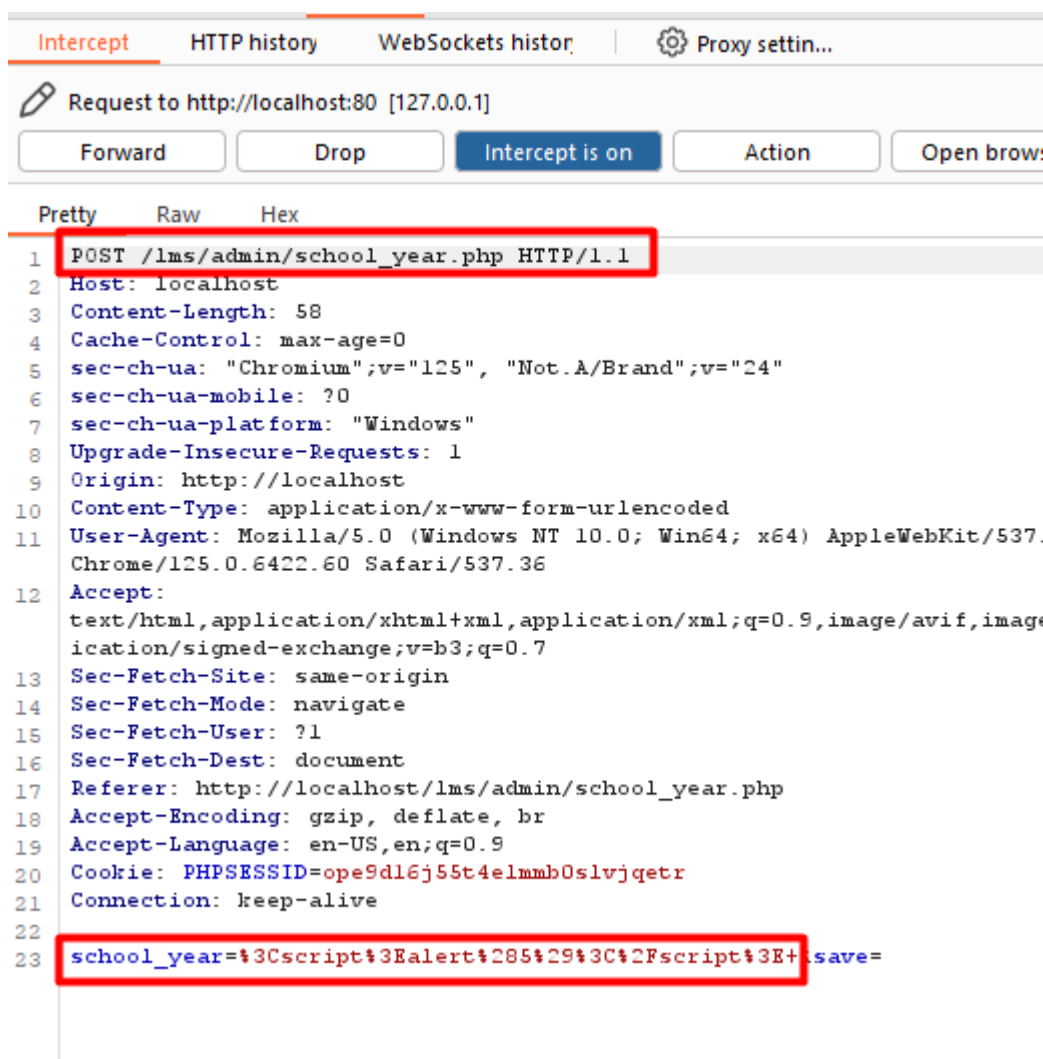

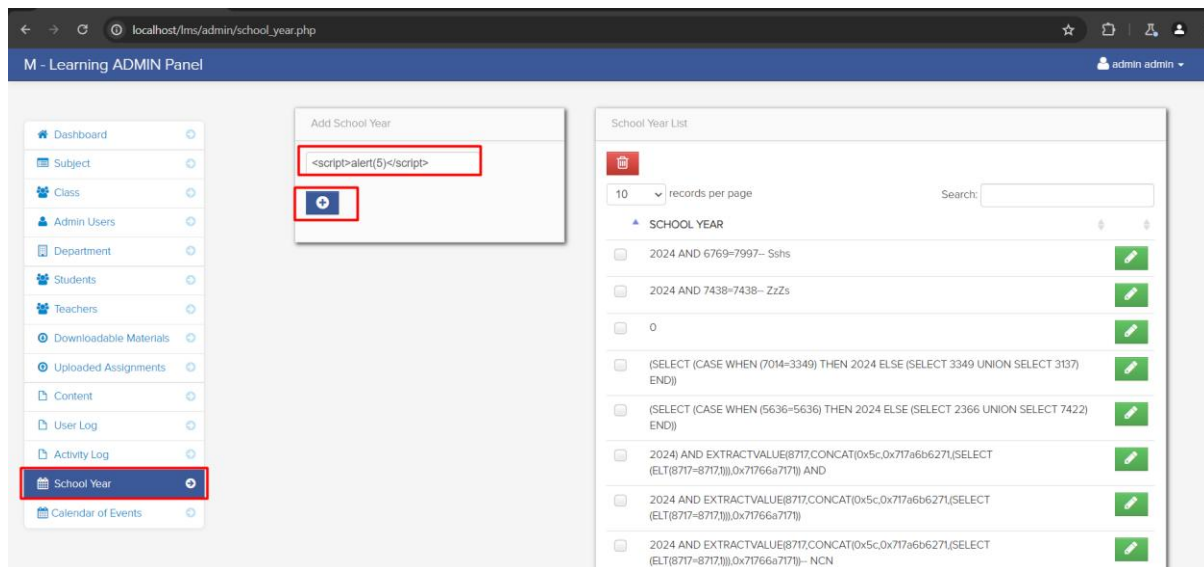

<b>Affected Vendor</b>	kashipara
<b>Affected Code File</b>	/lms/admin/school_year.php
<b>Affected Parameter</b>	school_year
<b>Method</b>	POST
<b>Type</b>	Stored Cross Site Scripting
<b>Version</b>	V1.0

## Steps to Reproduce:

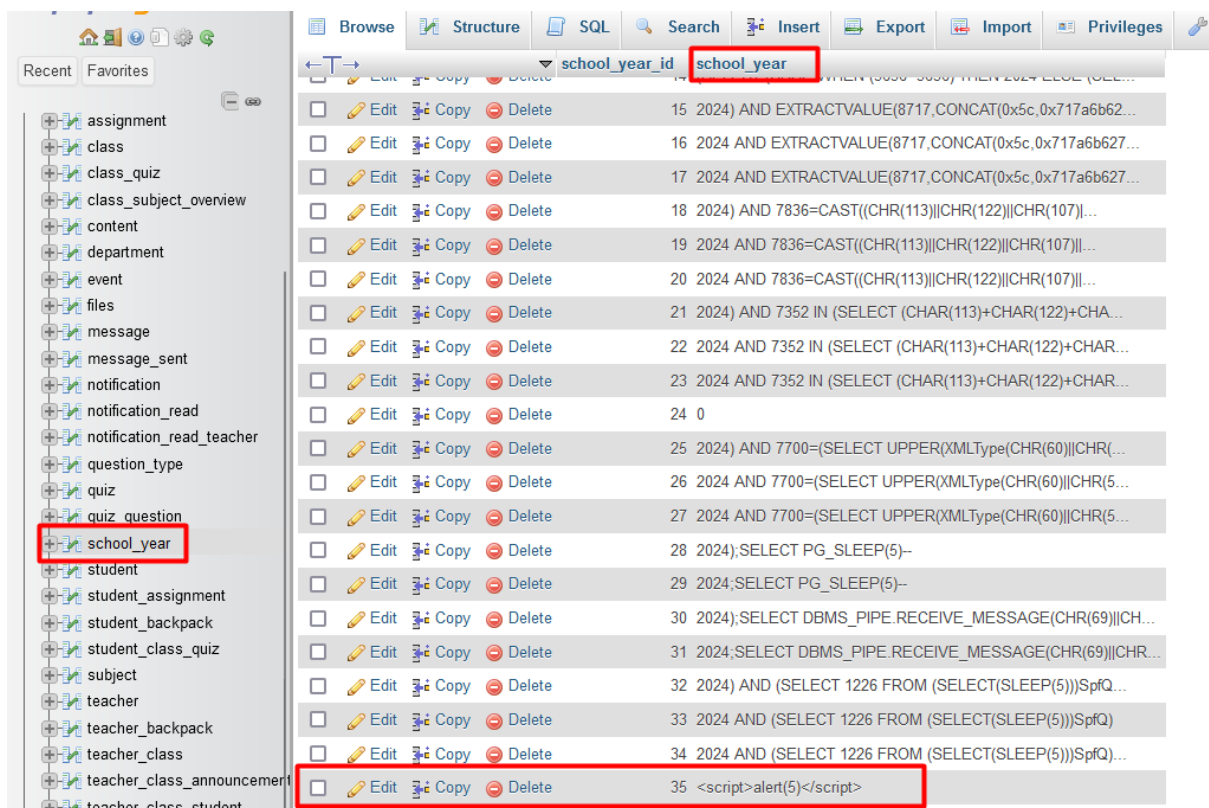

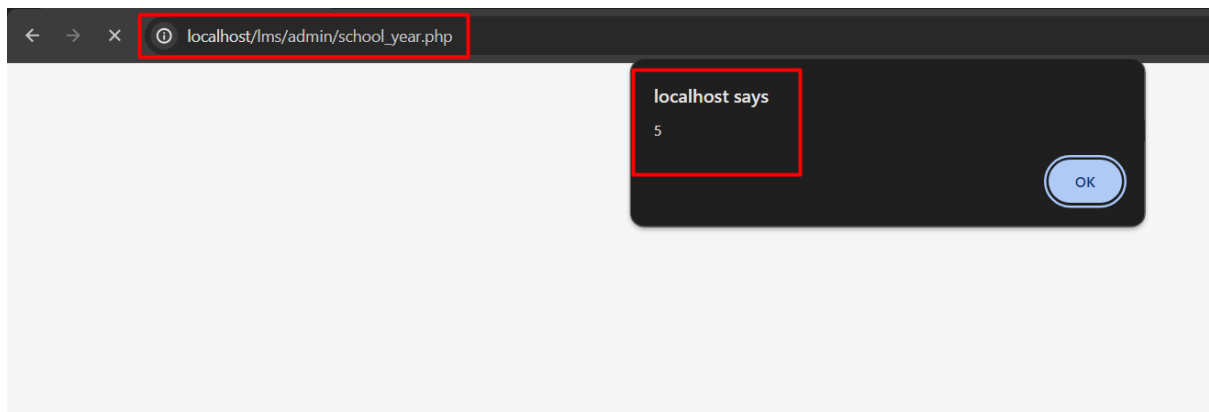

**Step 1:** Navigate admin login page and login with admin user credential at <http://localhost/lms/admin/index.php>

**Step 2:** Navigate the 'School Year' page and fill with payloads `<script>alert(5)</script>` in the year fields. Then click on add button to Add School Year.

**Step 4:** Now notice the given xss payload executed and stored on web server.
